

General Introduction of Weihai Hongtong Piping Material Co.,Ltd. China.

TYPICAL CONTENTS

Part 1: General Introduction

Part 2: Technical Presentation

Subsurface Flexible Production Tubing

Part 3: Technical Presentation
Surface lined-GRP and reelable RTP lines

Discussion and Look forward

Introduction

Weihai Hongtong Piping Materials Co., Ltd. was founded in 2001 with 60 million yuan registered capital. Specializing on engineering and production of surface and subsurface non-metallic line pipes series. Lead member of State High-technology Development Plan 863-Program on "Ocean deep water non-metallic material composite pipe development".

Listed in China National Equity Exchange and Quotations (NEEQ) stock market since 2015. Average manpower strength 200 staff. Current major clients are CNPC and Sinopec.

Address: 87 Guangzhou Road, Wendeng District, Weihai, Shandong, China

Process Asset Integrity Metallic & None-Metallic Part.03

Item of Comparison	Non-Metallic Typical for RTP	<u>Metallic</u> Typical for Bare Steel Pipe	
Material Of Construction	HDPE, PEX, PA, PVDF, PET, Glass Fiber, Galvanized Steel Wire	Carbon Steel, SS, Duplex SS, CRA Class, <u>PE Linings</u> etc.	
Pressure Capacity	Low & High Pressure #150, #300,#600 & #900 (special design for P&T)	Low & High Pressure #150, #300,#600,#900, #1500 etc	
Process Temperature	Our assessment, Cost effectiveness to bellow 8" & 65C	Special and costly materials & alloys above 70C and High cost of Replacements/maintenance.	
Biocide and Inhibition Treatment	Not Required	Special Treatment or Design in Mandatory	
Process Asset Integrity Program	Not Applicable. (special attention on above ground and UV protection)	Internal and External Pitting Corrosion Scales accumulations CP design for underground and sand dunes	
Operational Life	15-30 years	1-5 years	

Advantages of RTP, Production and Water Injection Systems

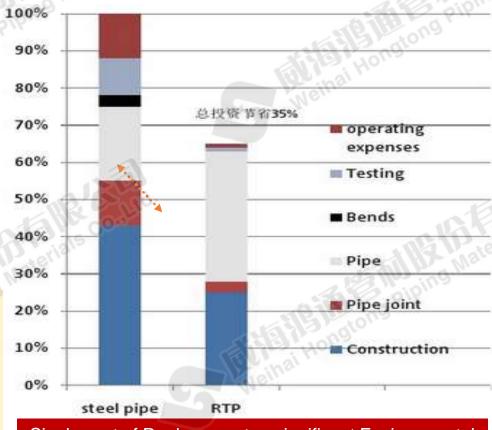

Economy Advantages and Considerations:

- Minimize production deferments for first oil. Quick Fix and short installation-time shortened 30-60%,
- •<u>Smaller Total Manpower Strength</u> & Cost Reduction 30-70% (personnel, materials and QC etc)
- Saving on Chemical supply, Environmental preservations and loss of containments, Cost of Coating, fewer joints..
- •Increase on Initial Capex easily regained from saving on Operational, Capacity and Total Cost of Ownership,
- Maximize ICV content cross the project supply chain & life cycle from design and abandonment, Basic Skills, Standardized Easy-Fix Connection System.

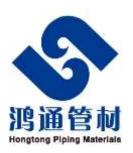

Technical Advantages and Considerations:

- Improve Site Personnel Safety and Environment
- Additional Fluid Design Handling Capacity, Ultra-low Friction coefficient, less pressure Drop in Long Distance
- •Less to No Leak points, Less Joints/connections per length
- •Inherently No Corrosion inhibitions or electrical CP needed,
- No Pigging and Chemical Injections for piping.

Typical Total Life Cost Assessment

Single cost of Replacement or significant Environmental spill may offset "perceived saving" on Steel pipes initial capex vs RTP.

Typical Application of RTP

OII-Gas industrial:

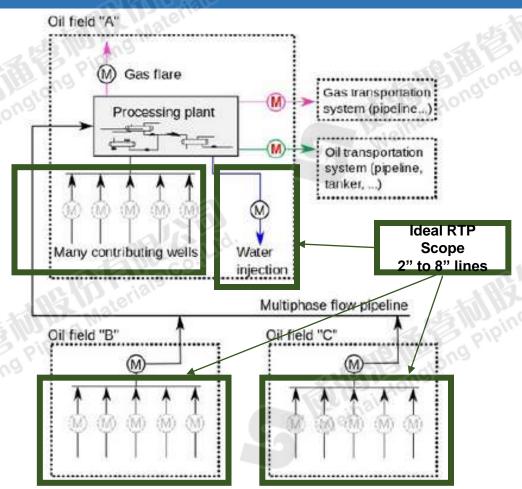

- >Wells gathering to Manifolds,
- Chemical Injection headers,
- Production Water Injection,
- > Production & Waste Water Disposal,
- ➤Oil and Water Transmission (upto 8" is most economical for RTP).

Utility Services:

- > Fire water ring system,
- Water Sources wells,

Target Production Series of RTP

PRODUCT STRUCTURE:

Inner Layer: Extruded with HDPE;

Intermediate Layer: Enhanced Layer which is Composed of

Polyester Fiber, (consideration for Steel Wire; in future)

Outer Layer: Extruded with Modified Polymer (and UV protection)

Expected weigh for 4" and 6" pipes

7 & 10 kg/linear M

NORMAL DESIGN TEMPERTRUE:

-40 ℃ to 65 ℃

NORMAL DESIGN PRESSURE:

Upto 11 MPa

ULTRA SPECIAL DESIGN TEMPARATURE Upto 90C.

APPLICABLE INTERNATIONAL QA/QC STANDARD:

API Q1,

15S,

Our <u>standard design consideration</u> for On-Shore Oil and Gas Industry and Utility Services in Oman, GCC and MENA. **Supply** or **Long-Term-Rental** agreements.

Typical Connection System

Typical Manufacturing Processes

Production Line of SubSurface Cable-Containing Spoolable Composite Pipes

Weihai, Shandong, China

Production Process of Surface RTP

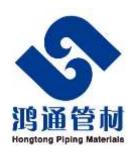

Molding Mechanical Structure Layer

RTP Production Line Video

Weihai Factory, Shandong, China

Pressure Testing Facility

 New testing facility capable of delivering 80 Mpa testing and Fluid media temperature up to 90 °C.

Computer Unit

Water Bath Heater and long-Hours Performance Testing Unit (**upto 40MPa**)

RTP Transportation – Hongtong China

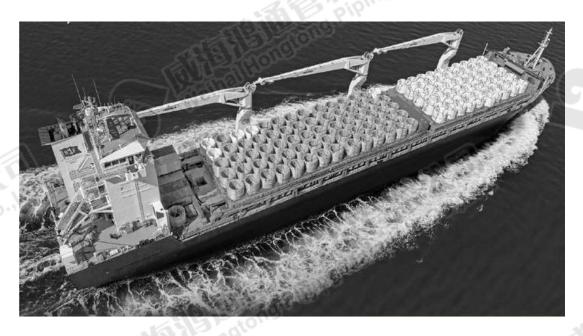

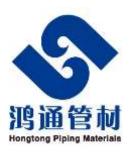

Oceans Transportation of RTP

Mid Size Shipment Approx 50-100km per flat-layer

Typical full sized large cargo ships can deliver upto 2,000 km.

RTP Transportation – Site Installations

Recommended transportation for quick installation for long lines and minimize installation time.

Transportable by road to suite local traffic specification and restriction requirements.

End Connectors

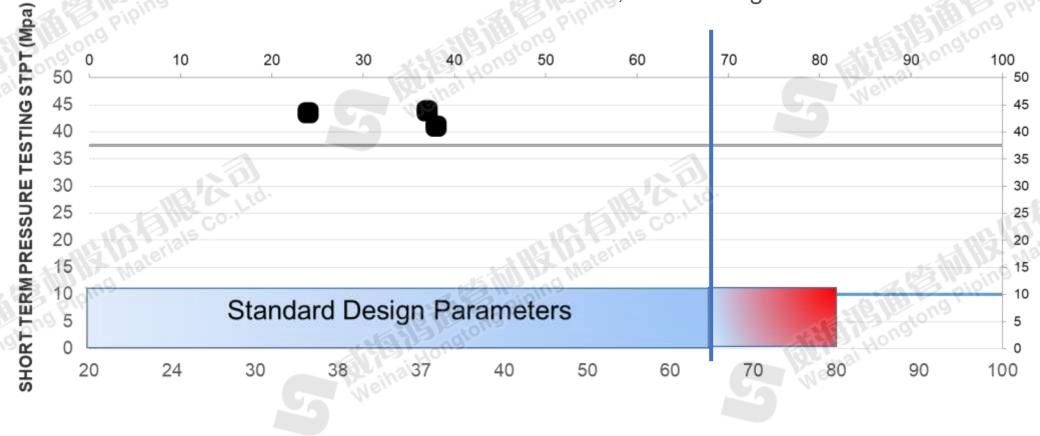

Oman Standard Design Condition

Target Design Envelop (4"#600, 65C. HDPEx liner, Fibre RTP, Colour Bright to White

Burst Pressure Capture Video

Burst Pressure Test -1 Oman Client

7/Dec/2018

Burst Pressure @ 43.9Mpa

Burst Pressure Test -2

Oman Client 10/Dec/2018

Burst Pressure @ 43.5Mpa

4", 10Mps, (PERT, Internal and External)

Typical Construction of RTP

Series of 1 meter spools were installed for continue testing/analysis

Typical Construction of RTP

Quality Control Policy Statement

Policy Statement for Quality Controls, Supply Chain and Work Ethics:

□ Qual	ity	Fir	st.
---------------	-----	-----	-----

- □Supplier verification of critical raw materials from local market or overseas must be subjected to internal testing and evaluations to meet company engineering parameters.
- □Research and Development will continue to be Hongtong's leading strength over global suppliers of Industrial flexible tubing on oil and gas sector.

Our Commitment

- Deliver products and services that meets standards and clients specifics requirements for <u>Subsurface</u>, <u>Surface</u> and <u>Marine</u> application of nonmetallic reinforced line pipes.
- Undertake clients technical enquiries and operational challenges to be solved until technical proven otherwise.

Thank You.

All are welcome to visit our team and production facilities.
